

## Homework on program correctness

This homework concerns the video-module on the correctness of programs.

**Question 1.** Write the formula for the number of values in the range  $b..c$ : \_\_\_\_\_

**Question 2.** In the video on ranges, we gave a mnemonic for remembering the number of values in a range. Write that formula here:

\_\_\_\_\_

**Question 3.** Below are four array segments. To the right, using what you wrote in answering question 2, write the number of values in each segment in terms of the relevant variables.

$b[h..k]$  \_\_\_\_\_

$b[k+1..m]$  \_\_\_\_\_

$b[m+1..n-1]$  \_\_\_\_\_

$b[n..p-1]$  \_\_\_\_\_

**Question 4.** State the formula that says segment  $b[p..q]$  is empty: \_\_\_\_\_

**Question 5.** Below, draw an array diagram that represents this assertion:

$$b[h..j-1] \leq x \quad \&\& \quad b[j] = x \quad \&\& \quad b[j+1..k] \geq x$$

**Question 6.** Write down the meaning of the Hoare triple  $\{B\} C \{D\}$  :

**Question 7.** Using the definition of the assignment statement  $\{R[x:=e]\} x=e; \{R\}$ , calculate the preconditions of the following assignment statements. You do not have to simplify them.

$\{$	$\}$	$\{$	$\}$	$\{$	$\}$
$x = y+1;$		$y = 2*x;$		$y = y+2;$	
$\{x * y = z\}$		$\{x + y + z = 2*x\}$		$\{x + y = 8\}$	

**Question 8.** Calculate the precondition of the following two sequences of assignments. It's recommended to simplify a precondition after calculating it before moving on the next step. Here's one reason to do that. Since  $x$  and  $y$  are being replaced in each one, it helps to keep the number of occurrences of them to a minimum. For example, you can rewrite

$$x = B \ \&\& \ y = x + A \quad \text{as} \quad x = B \ \&\& \ y = B + A .$$

{	}	{	}
$t = x;$		$x = x + y;$	
{	}	{	}
$x = y;$		$y = x - y;$	
{	}	{	}
$y = t;$		$x = x - y;$	
$\{x = B \text{ and } y = C\}$		$\{x = B \text{ and } y = C\}$	

**Question 9.** We gave the following rule for determining when an if-else statement is correct:

**Hoare triple for if-else:**

If  $\{Q \ \&\& \ B\} S1 \{R\}$  and  $\{Q \ \&\& \ !B\} S2 \{R\}$   
 then  $\{Q\} \text{ if } (B) S1 \text{ else } S2 \{R\}$

Write below a similar rule for determining when an if-statement is correct:

**Hoare triple for the if-statement:**

If \_\_\_\_\_

then  $\{Q\} \text{ if } (B) S1 \{R\}$
